Introduction

Many efforts are currently being carried in the fields of urban planning, public health and environment to search for levers, methods and strategies to practically implement the healthy urban planning (Hup) concept (Grant et al. 2017). The urban redevelopment project of Maisons L – Mercure neighborhoods located in Miramas, France, is the focus of an initiative aiming to do so. The urban project is part of the New National Program for Urban Redvelopment (Nhau) targeting specific deprived neighborhood and led by the National Agency for Urban Redvelopment (Anau).

Hup initiative’s objectives

• Better integrate health stakes into the Maisons L – Mercure redevelopment project.

• Explore light methodologies and tools, distinct from evaluation methodologies, to assess the topic of health in the process of this kind of urban project.

• Contribute to the reciprocal acceleration process between health and urban planning actors.

This initiative is led by Casi and Eusc and is financed by Paca Regional Health Agency and Métropole Aix-Marseille-Provence with the support of the Municipality of Miramas.

The existing area

Second to last picture belong to D. Michel (Municipality of Miramas):

• 2762 inhabitants (Miramas = 25 583 inhab.)

• 20 hectares

• 86 % of social housing

• Presence of two primary schools, a few shops, healthcare and social professionals, etc.

How to set the Hup concept in this urban project?

Understanding this urban redevelopment project and setting up a Hup working group

In order to reflect on how to integrate health, it was important to understand:

• the area, the stakes of the project;

• the time-frame and scope of the project (adjacent fig) including the operational planning tools and documents mobilized by such process and the underlying political, financial and legal constraints etc.;

• the actors and their roles (fig. below), the governance.

Further research will focus on finding relevant entry points which would not compromise the global approach to health.

Conclusion

Two key points are to be highlighted:

• It is important to understand the timeframe, the actors and their relationships, the financial mechanisms, the key documents etc. in order to identify the appropriate levers. A tactical approach, as defined in Harris et al. 2014, is therefore required, as the elaboration of an urban project is a complex process and not a rational or linear operation.

• Urban projects are not separated objects from other policies or projects. As processes in which time and energy are focused on a specific area or subject, they can represent an opportunity to act on other policies or projects in the area. This is particularly true in the case of Nihau projects, such as this one, in which the urban project is in relation with a social project.

Further research will focus on finding relevant entry points with which would not compromise the global approach to health.

Outcomes

• Members of WiG said they developed a “Health lens”;

• Better consideration of access to healthcare and care services in the project, emergence of a health center sub-project developed with local health professional.

Possible deliverables

Potential deliverables have been identified with WiG regarding the urban project timeframe, key documents, actors and governance;

• Hup charter to be included in the WiG agreement;

• Leaflets to several actors and concerning specific sub-projects (social housing operators, care and housing operators, soliciting developers concerning new housing municipality and staff concerning schools and health center);

• Report to Paca Regional Health Agency.

Bibliography

The authors warmly thank the members of the working group for their contribution as well as the institutional partners.
